DETAILED ACTION

Claims 1-2 and 11-18 are pending.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-2 and 11-18, drawn to compound of formula I wherein Z^1 , Z^2 , Z^3 , Z^4 are CR^{1a} and Z^5 is nitrogen, namely bicyclopymidine, composition and method of use.

Group II, claim(s) 1-2 and 11-18, drawn to compound of formula I wherein Z^1 , Z^2 , Z^3 , Z^5 are CR^{1a} and Z^4 is nitrogen, namely bicyclopymidine, composition and method of use.

Group III, claim(s) 1-2, and 11-18, drawn to compound of formula I wherein one of Z^1 , Z^2 , Z^3 is nitrogen and the other along with Z^4 , Z^5 are CR^{1a} , namely isomeric bicyclo bipyridine, composition and method of use.

The inventions listed as Groups I, II, and III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The requirement for unity of invention is two-fold: (1) common utility and (2) sharing a substantial structural feature disclosed as being essential to the utility. Both these conditions are to be met with.

Groups I, II, and III are independent and distinct from each other because they are directed to structurally dissimilar compounds that lack common core namely bicyclobicyclopyridazine versus bicyclopyrimidine versus isomeric bicyclobipyridine cores. Consequently, the groups require separate prior art searches. They can be made and used independently. Art, which may render obvious or anticipate one of the groups would not necessarily do the same for the other group. Each can support a patent, as the compounds of each group are capable of being utilized alone not in combination with other members listed in the Markush group.

Except for few carbon atoms and a nitrogen, all structural features are varied and therefore the core groups do not share the same structural feature essential for the disclosed activity. As seen in the prior art cited in the specification, the structural cores have different utility. Thus both the above conditions for unity of invention are not met with.

In view of distinct nature of the each of the inventions, the restriction is said forth in writing.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
